Print length : 606 pages

A Comprehensive for Students

This self-contained text provides a comprehensive to the field of statistics for students in biology and health sciences. It is designed to be used as a textbook for a one- or two-semester course, or as a self-study guide for students who want to learn the basics of statistics on their own.

The text covers a wide range of topics, including:

- Descriptive statistics
- Inferential statistics
- Regression analysis
- Analysis of variance
- Multivariate analysis

The text is written in a clear and concise style, with a focus on providing students with the skills they need to understand and apply statistical methods. It includes numerous examples and exercises that help students to learn the material.

This text is an ideal resource for students who are interested in learning the basics of statistics for biology and health sciences. It is also a valuable resource for researchers who want to refresh their knowledge of statistical methods.

Key Features

- Self-contained to statistics for students in biology and health sciences
- Covers a wide range of topics, including descriptive statistics, inferential statistics, regression analysis, analysis of variance, and multivariate analysis
- Written in a clear and concise style
- Includes numerous examples and exercises
- Ideal for students who want to learn the basics of statistics on their own

Table of Contents

1. to Statistics
2. Descriptive Statistics
3. Inferential Statistics
4. Regression Analysis

5. Analysis of Variance
6. Multivariate Analysis
7. Appendix

About the Author

Jane Doe is a professor of statistics at the University of California, Berkeley. She has taught statistics for over 20 years, and has published numerous research articles in the field. She is the author of several other textbooks, including " to Statistical Methods for the Social Sciences" and "Advanced Statistical Methods for the Social Sciences."

Reviews

"This is an excellent textbook for students in biology and health sciences who want to learn the basics of statistics. It is clear, concise, and well-written, and includes numerous examples and exercises that help students to learn the material."

- Professor John Doe, University of California, Los Angeles

"This text is a valuable resource for researchers who want to refresh their knowledge of statistical methods. It is also a great resource for students who want to learn the basics of statistics on their own."

- Professor Jane Doe, University of California, Berkeley
